SPECIAL RULES

Eastbound trains are superior to trains of the same class in opposite direction. Exceptions: No. 3 is superior to No. 8; No. 7 is superior to No. 4.

- No. 1. Registering Stations—Linnton, Bowers Junction and Wilkesboro.
- No. 2. Linnton and Wilkesboro are terminals for Nos. 1, 2, 3, 4, 5, 6, 7 and 8.
- No. 3. Unless some form of block signals are used, trains in same direction must keep at least ten minutes apart, except in closing up at stations, and operators must space trains ten minutes apart, using the train order signal for that purpose. They must show on clearance card the time train will be allowed to depart. Conductors, enginemen and motormen must respect the time marked on clearance card approaching all stations where the view is obstructed at a rate of speed that will enable them to stop should an emergency arise.
- No. 4. On Passenger Trains vestibule doors between coaches must be kept closed when made up in trains and under no circumstances will passengers be permitted to pass from one coach to another by stepping across.
- No. 5. Trap Doors must be kept down and side vestibule doors closed while trains are in motion. It is just as imperative that trap doors be down as it is that side vestibule doors be kept closed. Vestibule doors will be opened and trap doors up only when trains are making station stops.
- No. 6. When Passenger Cars are added to or taken off Passenger Trains trolley poles must be lowered from trolley wire before bus line is coupled or uncoupled. Fuses must not be renewed nor any part of the electrical appliances of motor cars touched or repaired until trolley has been lowered from trolley wire. Glass cover over Automatic Relay must not be removed. Defective relays must be reported at once.
- No. 7. Deraill Switches are located on all Passing Tracks and Spurs where there is danger of cars running out. Derails must be left at derail at all times, except when in use.
- No. 8. Automatic Block Signals.—All train movements through Cornelius Tunnel will be governed by automatic block signals. Vertical position of semaphore blade, and display of green light by night, indicates that block is clear and trains may proceed. Horizontal, or inclined position of the arm, or display of red light by night, indicates that block is occupied, and trains finding semaphore in this position will come to full stop and immediately protect by flag. If block signal is found at stop position Dispatcher will be immediately notified by telephone. No train, engine or motor will be permitted to go through tunnel block when block signals are in stop position without flagman preceding train entirely through tunnel. Fifteen (15) minutes should be allowed flagman in order to insure full protection before starting train and then train should not exceed a speed of five (5) miles per hour. No flag movement will be made through tunnel unless authorized by Train Dispatcher. If impossible to get in communication with Train Dispatcher above rule will govern.
- No. 9. At Linnton No. 1 and No. 7 wait connection with S. P. & S. No. 21; No. 3 with S. P. & S. No. 25; No. 5 with S. P. & S. No. 27.

SPEED RESTRICTIONS

- No. 10. Passenger Trains must not exceed thirty (30) miles per hour and freight trains twenty-five (25) miles per hour on any portion of the railway. Trains must reduce speed to ten (10) miles per hour through Linnton, over Holbrook Canyon and Rock Creek bridges. All trains will not exceed speed of fifteen (15) miles per hour over bridges between Linnton and Tunnel Spur.

YARDS

- No. 11. Linnton Yard Limits on S. P. & S. extend from 500 feet east of the east switch of passing track to 500 feet west of United Rys. connection switch.
- No. 12. Burlington Yard Limits extend from yard limit board five hundred (500) feet west of station to yard limit board five hundred (500) feet east of east head block passing track. All train movements at Burlington between yard limit boards must be made under full control. Passing track is located one thousand (1,000) feet east of station around a curve.
